INSPECTION OF COMMERCIAL FERTILIZERS

MADE FOR THE
STATE DEPARTMENT OF AGRICULTURE

The inspection of commercial fertilizers reported in this bulletin was made under the direction of the Honorable Andrew L. Felker, Commissioner of Agriculture. The state inspector, Mr. Eugene D. Sanborn, collected samples of 117 brands of fertilizer materials which were offered for sale by dealers or had been delivered to consumers during the year ending June, 1929. The general character of the fertilizer materials collected is shown by the following classification:

Complete fertilizer	94
Nitrogen and superphosphate	1
Nitrate of Soda	4
Ground bone	6
Natural manures	6
Superphosphate (acid phosphate)	4
Tankage	1
Basic slag	1

THE FERTILIZER LAW

The New Hampshire fertilizer law applies to all fertilizer materials offered for sale, whether mixed materials in the form of complete fertilizers or unmixed materials as superphosphate (acid phosphate), nitrate of soda, ground bone, tankage, etc. Under the provisions of the law every manufacturer or dealer who shall sell or offer for sale any fertilizer material shall furnish with each lot or package a clearly printed statement certifying the brand name under which it is sold, the name and address of the manufacturer, the number of net pounds the package contains and a chemical analysis stating the minimum percentages of nitrogen, of total phosphoric acid, of available phosphoric acid and of water soluble potash. No person shall sell or offer for sale any pulverized leather, hair or wool waste, peat, garbage tankage, or any inert material whatsoever, without an explicit printed statement of the fact conspicuously fixed to every package of such material.

The state official in charge of the administration of the fertilizer law is the Commissioner of Agriculture.

In Table I are given the grades of complete fertilizers collected, the number of brands found in each grade, the average analysis of each grade and the average retail price per ton.

TABLE I

Formula	Number of brands	Average per cent nitrogen	Average per cent total phosphoric acid	Average per cent available phosphoric acid	Average per cent water soluble potash	Average retail price per ton
0.82-9-4	3	1.04	9.95	9.18	4.02	\$43.33

CONFORMITY TO GUARANTEE

Thirty-eight of the 117 brands analyzed were found to contain less than the guarantee of one or more of the three constituents. The total number of guarantees on the 117 brands was 432, the total number of deficiencies 53, the per cent deficient 12.3. This shows some improvement over

last year when the corresponding per cent was 19.6. Many of the deficiencies were comparatively negligible, the small deficiency in one constituent being offset in value by over-run in other constituents.

A detailed summary of the deficiencies in the 38 brands which failed to meet their guarantees follows:

	Brands	Total Deficiencies
Nitrogen, total phosphoric acid, available		
phosphoric acid and potash	1	4
Nitrogen, total phosphoric acid and		
potash	1	3
Nitrogen, available phosphoric acid and		
potash	0	0
Nitrogen, total phosphoric acid and		
available phosphoric acid	0	0
Nitrogen and total phosphoric acid	1	2
Nitrogen and available phosphoric acid.....	1	2
Nitrogen and potash	2	4
Nitrogen	18	18
Total phosphoric acid, available phos-		
phoric acid and potash	0	0
Total phosphoric acid and potash	0	0
Available phosphoric acid and potash.....	1	1
Potash	2	2
Total phosphoric acid and available phos-		
phoric acid	6	12
Total phosphoric acid	1	1
Available phosphoric acid	4	4
	38	53

NITROGEN DEFICIENCIES

One hundred twelve brands were guaranteed to contain nitrogen in amounts varying from 0.82 per cent to 10 per cent. Twenty-four failed to meet the guarantee. The amounts of the deficiencies were 0.05 per cent; 0.05 per cent; 0.08 per cent; 0.11 per cent; 0.11 per cent; 0.11 per

cent; 0.11 per cent; 0.11 per cent; 0.12 per cent; 0.13 per cent; 0.14 per cent; 0.16 per cent; 0.18 per cent; 0.20 per cent; 0.20 per cent; 0.20 per cent; 0.20 per cent; 0.22 per cent; 0.22 per cent; 0.28 per cent; 0.31 per cent; 0.50 per cent; 0.62 per cent; 0.68 per cent. One-half of the deficiencies was less than 0.20 per cent. These deficiencies decrease the commercial valuation of the fertilizers less than \$1.00 per ton. The greatest deficiency, 0.68 per cent, is equivalent to approximately \$3.50 per ton.

PHOSPHORIC ACID DEFICIENCIES

One hundred thirteen brands were guaranteed to contain phosphoric acid. Sixteen brands failed to meet their guarantees. Three were deficient in total phosphoric acid, six in available phosphoric acid and seven in both total and available phosphoric acid. The deficiencies in total phosphoric acid were 0.16 per cent; 0.18 per cent; 0.25 per cent; 0.28 per cent; 0.33 per cent; 0.35 per cent; 0.49 per cent; 0.68 per cent; 0.81 per cent; 1.36 per cent. The deficiencies in available phosphoric acid were 0.16 per cent; 0.20 per cent; 0.23 per cent; 0.25 per cent; 0.28 per cent; 0.32 per cent; 0.42 per cent; 0.50 per cent; 0.59 per cent; 0.74 per cent; 1.52 per cent; 1.61 per cent; 3.13 per cent. A deficiency of 3.13 per cent available phosphoric acid is equivalent to approximately \$5.00 per ton.

POTASH DEFICIENCIES

One hundred samples were guaranteed to contain potash. Seven failed to meet the guarantee. The amounts of the deficiencies were 0.14 per cent; 0.19 per cent; 0.19 per cent; 0.31 per cent; 0.39 per cent; 0.66 per cent; 1.56 per cent. The greatest deficiency is equivalent to about \$1.50 per ton.

In the tabulation of the analyses in the following pages deficiencies of two-tenths of one per cent or more are shown in *Italics*. The names of the manufacturers are arranged alphabetically, and under the manufacturer the different brands are arranged alphabetically or numerically by formula.
